

Project III : Final Project

ICOM3010 Self-Directed Study

Evaluation : 40% of final grade

Due Date : Apr 16

Project Description

The best way to practice all your learning of a new technology or topic is to develop a project that puts it to practice. This is your final project in the Self-Directed study course.

The project requirements are:

- Develop a final project that encompasses a large majority of the learning of your topics. For example, if your topic was Vue.JS, your final project could be to re-engineer one of our larger full stack applications using Vue.JS.
- The final project can be whatever you choose – be creative! Note that your project idea must be approved by the instructor to ensure the scale of the project is appropriate.
- The complexity of your final project must go well beyond the introductory level of your special topics lesson presented to the group. Essentially, this project will be the ultimate portfolio piece of the course.
- You will present your final project through an informal walkthrough on the due date. Be prepared to run your project, go over details of your project, explain the code, etc.

Requirements (Marks breakdown)

Final Project	
Project demonstrates your new learning on the topic / pushes your knowledge / runs well with no major bugs	Final Project 10
	TOTAL SCORE 10

Other Notes

- This project will be assessed during a code review on the due date.
